The new H 2000 / H 4000
For individualists

Inside Competence. Our extensive know-how allows us to offer innovative and comprehensive production solutions for powertrain, drive-train and chassis components. Highly productive. For minimal piece-part costs.

Made to work. Application know-how and technological competence to cater for all production requirements. With a new generation of machining centres offering a wide range of options in our proven quality.

Just closer to you. Individual services and custom-made service packages ensure optimum productivity and highest availability of your machines. Anywhere in the world, on site and around the clock.

Horizontal machining centres with the productivity seal of approval

HELLE stands for high-end machining with maximum productivity. HELLE Machines benefit from the know-how and experience gained through many decades in the manufacture of machining centres. Let us show you how you can profit from our experience — you can only win!

When you’re dealing with challenging manufacturing tasks, you want all the solutions from one source. HELLE Machines has the answer to your needs. Due to our comprehensive application know-how and high level of technological competence we can provide solutions for all requirements of modern production. A new generation of versatile machining centres with a wide range of options rounds off our product range with a clear focus on our customers’ needs whilst always providing the typical extra quality from HELLE: a plus in productivity, security and flexibility.

HELLE Machines aims to build machines precisely tailored to your production needs. With this aim in mind we have now transformed and refined our business portfolio for you.

There’s a lot we can do for you. Let’s get started!
You need machining centres that can be fully customised to your requirements whilst offering an attractive price/performance ratio and the confidence that they will produce reliably even under extreme loads. Therefore our task was to develop a range of highly standardised but flexible machines with unbeatable load capacity.

Tailor-made off the peg
Due to the modularity of the variants and options available for the new H series, customers can configure their own “tailor-made off the peg” machining centre. Spindle, spindle taper, tool magazine, chip disposal can be selected according to individual requirements and machining strategy. With options proven in everyday production HELLER machining centres can be transformed into customised performance packages.

Realistic dynamic rates
All machines from the new H series have one thing in common: they offer unbeatable productivity. The machines have been adequately designed to provide minimal positioning times. Consequently the H series can do without extreme rapid traverse and acceleration rates, so that the machines are not unnecessarily subjected to extreme loads. This enhances the machine life and provides additional savings.

Robust processes
Gaining a few tenths of a second is not what makes the difference, what counts is that production runs smoothly. The new H series was designed for stable processes in day-to-day production: proven components, adequate speeds and a wide range of standard equipment that can be extended with numerous options. In brief: a robust machine that can be run at full load even to the limit, seven days a week in 3-shift operation.

Machining at its best
HELLER is synonymous with milling. For us that is a promise and commitment at the same time. Whether it’s high-speed cutting, heavy cutting, dry or MQL machining: the machining centres from the H series are suitable for any machining strategy and provide high productivity throughout all disciplines.

Application experience you can feel
Reliability and ease of operation are important factors for availability. With the H series you can benefit from our application experience every day - whether it’s the workpiece setting station, tool loading or programming. We have also completely revised the maintenance concept for the H series, a factor that has a crucial influence on the lifecycle costs of a machine.

HELLER’s H series – a bit more of everything.
Machine concept H 2000 / H 4000

Sizes H 2000 / H 4000

- X = 630 mm / 800 mm
- Y = 630 mm / 800 mm
- Z = 630 mm / 800 mm

Machine bed and column

- Optimised with state-of-the-art simulation technology
- Optimised topology of structural components resulting from many years of experience from in-house simulation
- Inherently rigid machine bed
- Cast components, e.g. column and rotary tables designed to provide rigidity

Drive technology

- Enhanced power and precision
  - Twin drive in the Z-axis for symmetric force application and free chip fall
  - Ball screw drives arranged in-between linear guideways
  - Reduced performance demands on the individual ball screw drives at ultra-short positioning times

Spindle

- Highest precision made by HELLER
  - Proven zero-spindle system based on extensive HELLER know-how
  - Maintenance-friendly, modular spindle unit
  - In-house manufacturing competence ensures highest quality
  - High accuracy due to precision cooling
  - Spindle variants for eco, power, speed and high-speed cutting
  - Clear spindle nose allows extended reach into the workpiece
  - Innovative coolant purging for spindle and tool
  - SK 40, HSK 63, BT 40 spindle tapers

The benefits to you:

- Installation without anchoring ensures high flexibility for machine installation
- High cutting performance and precision for every machining strategy
- Cost-effective price

The benefits to you:

- High precision thanks to twin drive in Z-axis
- Reduced table deformation and higher precision with drives arranged on the inside
- Minimal axes positioning times ensure high productivity
- Reduced wear for low operational cost

The benefits to you:

- Zero-spindle system ensures fast and cost-effective exchange of the spindle
- Stiff spindle nose for high process stability
- Dynamically stiff, short design of the spindle unit and water-cooled spindle neck provide high precision
- Reduced coolant dispersion provides cleaner machine and tools
Machine concept H 2000 / H 4000

Work area

- Free chip fall, higher accuracy
- Chip fall before the spindle and between rotary table and pallet changer, deep chip chutes in work area and setting station
- Spacious concept: All items are integrated into the machine structure
- Components and units fully integrated into the machine structure
- Very compact control cabinet, identical for all machine types
- Compact design provides very small footprint in this machine range
- Installation without anchoring on vibration-damping levelling shoes
- Low overall weight

Tool management

- Customised to your requirements
- Chain-type tool magazine with 54 places as standard, optional chain-type magazine with 80 or 160 places or rack-type magazine with more than 400 places
- Tool lengths up to 450 mm, tool diameters up to 160 mm
- 2-axis servo-changer provides shortest chip-to-chip times
- Fast tool break monitoring with reference measurement (option)
- Tactile tool measuring system (option)
- SK 40, HSK 63, BT 40 spindle tapers

Workpiece management

- More space, less chip deposits
- Right rotary table with two separate Z-axes (option)
- New brake system provides high clamping force in the B-axis of the rotary table
- High-workpiece mass of up to 1,000 kg or 1,400 kg
- Hydraulic workpiece clamping available as an option
- Air blast for functional surfaces (rotary table and setting station)
- Friction-limited 4 x 90° indexing at the setting station with foot release

The benefits to you:

- Reduced downtimes due to contamination, extended cleaning intervals
- Reduced production costs
- Higher workplace precision

The right tool for each operation

Different spindle versions for high productivity

The benefits to you:

- Wide range of tools and tool geometries
- Reuse of existing cutting tools
- Time-saving strategy for short tool loading times
- Tool condition monitoring maintains workpieces

The benefits to you:

- Allows machining of large workpiece geometries and masses
- High-process stability thanks to new rotary table clamping
- Compact rotary table provides optimised chip flow
- High machining accuracy through reduced chip deposits and panamic clamping
- Good accessibility to stationary hydraulic valves on the switchboard

The benefits to you:

- Reduced space and foundation requirements save infrastructure costs
- Machine easier to relocate due to quick and easy installation
- Vibration insulation provides enhanced machining accuracy

The benefits to you:

- Allows machining of large workpiece geometries and masses
- High-process stability thanks to new rotary table clamping
- Compact rotary table provides optimised chip flow
- High machining accuracy through reduced chip deposits and panamic clamping
- Good accessibility to stationary hydraulic valves on the switchboard

Space requirements

- Smaller footprint, reduced costs, faster installation
- Components and units fully integrated into the machine structure
- Very compact control cabinet, identical for all machine types
- Compact design provides very small footprint in this machine range
- Installation without anchoring on vibration-damping levelling shoes
- Low overall weight

Workpiece management

- More space, less chip deposits
- Right rotary table with two separate Z-axes (option)
- New brake system provides high clamping force in the B-axis of the rotary table
- High-workpiece mass of up to 1,000 kg or 1,400 kg

- High machining accuracy through reduced chip deposits and panamic clamping
- Good accessibility to stationary hydraulic valves on the switchboard

The benefits to you:

- Wide range of tools and tool geometries
- Reuse of existing cutting tools
- Time-saving strategy for short tool loading times
- Tool condition monitoring maintains workpieces
Spindle

- SK 40 spindle taper acc. to DIN 69871 form A, AD or B with pull stud acc. to DIN 69872 form A or B
- HSK 63 spindle taper acc. to DIN 69893 form A
- BT 40 spindle taper acc. to JIS B 6339-1992 with pull stud JIS B 6339-1992 40P

Workpiece management

- High-speed spindle for facing in rear
- High-speed spindle, max. 1,500 rpm, 480 kg
- Swiss roll "S" 1.5" roll on the bedding machine for high speed
- Automatic tool changing option and automatic setting where the tool is located
- Chamfer on 25 bar table
- Hydraulic tool changing system
- BAR for toolchanging with proportional control (option)

Test management

- Clamping fixture not recognizable with 16, 20 or 25 places
- Tool type recognition with more than 250 scan
- 2-axis changer provides direct tool change
- shelves: 3x3x3 or 4x4x4 filters
- Tool holding to suit type recognition possible in machining (option)
- Tool change monitoring with cnc tool monitoring system (option)
- Chip turn measuring system (option)

Process engine

- EcoCutting: 10,000 rpm / 17 kW / 81 Nm
- PowerCutting: 10,000 rpm / 38 kW / 242 Nm
- SpeedCutting: 16,000 rpm / 40 kW / 96 Nm
- HighSpeedCutting: 24,000 rpm / 25 kW / 40 Nm

Chain-type tool magazine with 54, 80 or 160 places
- Rack-type magazine with more than 400 places
- 2-axis servo-changer provides shortest chip-to-chip times
- Optional cleaning of tool cartridges and holders
- Tool loading to rack-type magazine parallel to machining (option)
- Fast tool break monitoring with reference measurement (option)
- Tactile tool measuring system (option)
- Friction-locked 4 x 90° indexing at the setting station with foot release
- Automatic rotating setting station and automatic setting station door (option)
- 60 bar or 200 bar hydraulic workpiece clamping (option)
- 200 bar workpiece clamping with proportional control (option)

Automation

- SINUMERIK 840D solution line or Fanuc 310i-A
- Operating modes 2 and 3 included in standard scope of supply
- Increased operator convenience
- pallet and job management
- Automatic return to home position
- Graphical diagnostic tools
- Remote diagnostics of the machine and coolant unit
- Comprehensive option package
- Standardised mechanics linkage systems (option)
- Safety graphic point with a 2-axis control (option)

Chip disposal

- Wiper conveyor
- Belt conveyor with 17 bar conventional belt area cleaner
- Taper conveyor with 17 bar conventional belt area cleaner
- Ultimatic 99 bar high pressure pump system
- Ultimatic 17 bar high pressure pump system
- Optional high pressure pump, option

Typical extra quality from HELLER

- Extensions and options
- Typical extra quality from HELLER
- Standardised mechanics linkage systems (option)
- Safety graphic point with a 2-axis control (option)
SPEED PACK:
for high-speed cutting

Based on our experience we are offering two different packages for the H series tailored to the specific requirements of our customers. Your package benefits:
you get exactly the performance you need at a cost-effective price.

For high-speed cutting
The SPEED PACK has been specifically designed for high-speed machining of light metals. Two different spindles with HSK 63 spindle taper are available: the standard spindle with 16,000 rpm, a spindle power of 40 kW and a torque of 96 Nm. Optionally, a spindle with 24,000 rpm is available.

The SPEED PACK also provides high axis dynamics: the H series provides a maximum acceleration of 10 m/s² and a maximum rapid traverse of 90 m/min. A newly developed 2-axis servo-changer ensures shortest tool change times and ultra-short chip-to-chip times. A real added benefit of the H series is its robust design. Quick and efficient coolant disposal is guaranteed via a paperband filter unit.

SPEED PACK includes
- SpeedCutting unit with 16,000 rpm
- 10 m/s² acceleration and 90 m/min rapid traverse
- Paperband filter unit and work area flushing
- HSK 63 spindle taper
- Chain-type magazine with 54 places
- NC rotary feed table

Extensions
- HighSpeedCutting unit with 24,000 rpm
- 60 or 200 bar hydraulic workpiece clamping
- Changeover tool magazine with 80 or 160 places or rack-type magazine with 400 places including wet tool cleaning
- Measuring probe and numerous software options

Ready for the requirements of day-to-day production

State-of-the-art high-end control technology

For flexible integration into manufacturing systems

The perfect solution for all strategies

Auxiliary equipment
POWER PACK:
for heavy cutting

Power at your fingertips

Two things are essential for series machining of cast iron and steel materials: the performance and load capacity of a machining centre. The POWER PACK fulfils exactly these requirements.

For heavy cutting
The drive concept and spindle included in the POWER PACK are specifically geared to performance. The spindle provides a torque of 242 Nm, a spindle power of 38 kW and a speed of 10,000 1/min – ideal for series production of cast iron and steel parts.

The POWER PACK comes with work area flushing and a paperband filter unit with a 50 bar high-pressure pump. Depending on your daily requirements you can select an SK, HSK or BT spindle taper. With its sturdy basic design and high load capacity the POWER PACK sets new standards.

POWER PACK includes
- PowerCutting unit with 10,000 1/min, 242 Nm torque and 38 kW power
- Paperband filter unit and work area flushing
- SK 40, HSK 63 or BT 40 spindle taper
- Chain-type magazine with 54 places
- NC rotary feed table

Extensions
- 60 or 200 bar hydraulic workpiece clamping
- Chain-type tool magazine with 80 or 160 places or rack-type magazine with 400 places including wet tool cleaning
- Measuring probe and numerous software options
Scores well for everyday use

The productivity of a machine tool is defined by its cutting performance and reliability; while safety and ease of operation play a major role for its availability. With the H series you can profit from our application experience day in and day out.

The operating stations of the machine are arranged for optimum accessibility; the reach to the setting station centre is conveniently short to make workpiece handling easy. The tool loading station provides a very practical function: tools can be loaded while the spindle is running, so no time is wasted.

Programming in the familiar system environment

Concentrated application know-how also forms the basis for the state-of-the-art high-end control technology incorporated in the H series.

The benefit to you: programming takes place in the well-known system environment with either SINUMERIK 840D solution line or Fanuc 310i-A. Both controls feature a nearly identical range of options. The basic configuration comprises the integrated safety functions, operating modes 2 and 3 and tool loading during machining to save time.

Optimised life cycle costs

The acquisition costs are only one factor affecting the overall costs of a machine - another important aspect to consider are the maintenance costs. The H series features a number of innovations that provide a real benefit in terms of life cycle costs.

All function-relevant systems and components incorporated in the H series are installed within quick and easy reach. For example: components arranged for ease of maintenance and removable guard panels provide access at the touch of a hand. What is more, the Z-axis cover and the spindle can be replaced in no time at all thanks to the proven zero-spindle system. In most cases, maintenance and servicing or even repairs can be performed in a few easy steps. The quick response times of the HELLER spare parts service also help to keep production downtimes short.

Service and maintenance points are limited to a few locations to allow for easy inspection and operation.
We are here for you. Worldwide.
