Milling at its best: Hermle machines are often at the forefront when it comes to optimized results. The proverbial Hermle precision in combination with process consulting and project management has made us an important machine manufacturer in nearly all key sectors: From large complex components to the very smallest components in the high-tech sector. Versatile applications, uncompromising results Hermle – the original.

Hermle is at home in all sectors. For us, ensuring the highest precision and reliable machining is always paramount. Our machines are built for daily use.
02
The machine

The C 400: a dynamic machining center designed for entry-level 5-axis/5-side machining. Features galore to ensure high-precision, economical parts production.

TECHNICAL DATA

Traverse path X-Y-Z: 850 – 700 – 500 mm
Speed: 15000 / 18000 rpm
Rapid linear traverses X-Y-Z: 35 m/min
Linear acceleration X-Y-Z: 6 m/s²
Control unit: TNC 640
Rigid clamping table: 1070 x 700 mm
Max. table load: 2000 kg

Swivelling rotary tables:
- Machining table with worm: Ø 440 mm, Ø 650 x 540 mm
- Swivelling range: +91° / -139°, +91° / -139°
- A-axis speed
  - One-sided drive: 25 rpm, 25 rpm
- C-axis speed: 30 rpm, 30 rpm
- Max. table load: 450 kg, 600 kg
02.1
New dimensions in dynamics
3 axes in one tool for workpiece-independent dynamics

Pickup magazine integrated into the base body to save space

Stainless steel lining of entire working area

Optimized chip ejection in working area during dry machining

Swivelling range of swivelling rotary table +91° to -139°

Largest working area relative to the support surface

Accessibility, excellent ergonomics

Force characteristics: 3 guideways with one guide shoe for ideal force balance

Linear axes above the working area

Modified gantry design with optimum main axis support

Worm gear (C-axis)

One-sided drive (A-axis) Avoidance of torsion and high accuracy

Mineral casting design with excellent vibration damping properties

Largest working area relative to the support surface

Optimized chip ejection in working area during dry machining

Swivelling range of swivelling rotary table +91° to -139°

Largest working area relative to the support surface

Accessibility, excellent ergonomics
02.2
The workpiece

Many important points must be observed in order to guarantee that every workpiece is machined perfectly. For this reason, Hermle has been working on perfecting and optimizing the machining process for many years. This is the reason that the C 400 is now equipped with:
- the largest working area relative to the installation area.
- the largest swivelling range of workpieces in the working area.
- utilization of the entire traverse range.
- a large collision circle between the table flanges.

THE WORKPIECE DIMENSION

- Unlimited crane top loading to above the table center
- When loading the crane the tool spindle moves to the tool magazine – this means the working area is completely clear and accessible

<table>

</tbody>
</table>

Collision circle: Ø 885 mm
Ergonomics

Built for daily use: The Hermle C 400 can be ergonomically adapted for every machine operator for optimum ease of use, simple operation and uncomplicated maintenance.

- Ergonomic control panel:
  - Adjustable height +/- 100 mm (Option)
  - Tilting screen 5 - 35° (Option)
  - 19" screen
  - Control panel pivotable from
    the tool loading point to the working area

- Optimum loading height
- Crane loading possible
- Minimum interval between machining table
  and operator
- Large door opening

**HIGHLIGHTS**

- **Door opening 900 mm**
- **Vertical table clearance 625 mm**
- **Loading height 925 mm**
- **Control panel, pivotable**

Screen pivotable by up to 30 °C

Practical, slide-in storage

Control panel
+/- 100 mm
height adjustable
Table variants

Hermle’s swivelling rotary table has revolutionised the concept of 5-axis machining. The C 400 also relies on 5-axis operation, and the swivelling rotary table with worm gear makes full use of its advantages. All machining tables are manufactured exclusively and entirely at our plant in Gosheim.

TECHNICAL DATA

- High degree of freedom in working area
- Very high table loading (up to 2000 kg with the highest accuracy)
- No accumulation of chip on the swivelling rotary table (swivel table)
- Swivelling axis A and rotary axis C are located within the workpiece (U-shape)
- Wide flange spacing results in a very large collision circle in the working area
- High swivelling range for undercuts

Worm table

- Generously dimensioned worm gear
- Low torsion attachment
- Direct, absolute measuring system

DRIVE TECHNOLOGY

- Centrical table load
- Drive directly on table housing = low torsion A axis
- Direct, absolute measuring system
- Good maintenance accessibility
- A axis integrated in machine bed

One-sided drive

- Mechanical drive on right of table housing
Uncompromised perfection: this drive design accesses the gearwheel on the table housing directly and so completely eliminates shaft torsion on the swivelling rotary table. This is the only way to achieve the highest precision.

Made in Germany – made in Gosheim: The C 400 table variants stand for the highest quality and optimum material usage from the cast housing to the installed gear motors. At our main plant in Gosheim, these swivelling rotary tables are laying the foundations for the precision, accuracy and quality of the machined surfaces.

Hermle’s swivelling rotary tables are equipped with cutting-edge drive technology for high dynamic during 5-axis machining as the slowest axis determines the speed of 5-axis simultaneous milling. High-torque motors and the adapted gear can position loads of up to 600 kg rapidly and, most importantly, with exceptional precision.
Rigid clamping table
Clamping surface: 1070 x 700 mm

Equipped with the rigid clamping table, the machine can deal with clamping weights of up to 2000 kg – ideal for 3-axis machining of large, bulky and heavy workpieces.
T grooves: parallel 10 / 14 H7

Swivelling rotary table
Drive type C axis: Worm

The "Worm" swivelling rotary table provides the ideal entry into 5-axis technology.
02.5
Tool spindles

The C 400 is equipped with two-part tool spindles. Both spindle components can be replaced quickly and easily when servicing. With the different speed ranges and tool holding fixtures the tool spindles are suitable for a wide variety of machining tasks. Like the machining tables, all tool spindles are manufactured exclusively and entirely at our plant in Gosheim.

TECHNICAL DATA

- High-tech tool spindles for demanding milling processes
- Slim-end tool spindle for machining deep cavities
- Few projecting edges (prevention of collision)
- Two-part tool spindle (faster, easier replacement)
- Collision protection (collision sleeves) prevents damage in 50% of collisions

Collision protection with collision inquiry

Each tool spindle has several collision sleeves which compensate collision energy in the Z direction.
Tool spindle 15000 rpm

Maximum spindle speed: 15000 rpm
Output 20% c.d.f.: 20 kW
Torque 20% c.d.f.: 180 Nm
Tool holding fixture: SK 40 / HSK A 63
Tool spindle: two-piece
Collision protection: collision sleeves

Tool spindle 18000 rpm

Maximum spindle speed: 18000 rpm
Output 20% c.d.f.: 20 kW
Torque 20% c.d.f.: 180 Nm
Tool holding fixture: HSK A 63
Tool spindle: two-piece
Collision protection: collision sleeves
The tool magazine

The C 400’s tool magazine holds up to 38 tools in the standard version and is integrated into the machine bed to save space. It can be filled from the side by swivelling the control panel to the loading point.

TECHNICAL DATA

Pick-up magazine

Integration into the machine bed

Excellent accessibility

Control panel pivotable to the loading point

Tool changer (pick-up)

Interface: SK 40 / HSK A 63
Magazine pockets: 38
Max. tool weight: 8 kg
Max. tool diameter: Ø 80 with corresponding adjacent pocket allocation Ø 125 mm
Max. tool length: 300 mm
Max. magazine load: 152 kg
Chip-to-chip time: approx. 6 s
Additional tool magazine ZM 50

- Magazine pockets: 50
- Max. tool weight: 8 kg
- Max. tool diameter: Ø 80, with corresponding adjacent pocket allocation Ø 125 mm
- Max. tool length: 300 mm

- Max. tool length: 300 mm
02.7
Control unit

The C 400 is fitted with a Heidenhain TNC 640. The control unit provides diverse program functions. Hermle simplifies programming and operation still further with comprehensive extra features.

Heidenhain TNC 640

- Dynamic Efficiency (Option) – Active Chatter Control (ACC), Adaptive Feed Control (AFC), trochoidal milling
- Dynamic Precision (Option) – Cross Talk Compensation (CTC), Active Vibration Damping (AVD)
- 19” TFT colour flat screen
- Keyboard unit with full keyboard, integrated trackball, USB and Ethernet interfaces
- Fully digital with HSCI interface and EnDat interface
- Programming in Heidenhain plain text or per DIN/ISO
- Standard drilling and milling cycles
- Touch probe system cycles
- Free contour programming
- Special functions for fast 3D machining
- Automatic calculation of cutting data
- Software option Kinematic Opt (Measurement cycle for improving accuracy of rotational and swivelling operations)

For further advantages and detailed technical data, please see the Heidenhain brochures.

Hermle control tools

Hermle “Tool-Management-Control”
Simple, Hermle tool management system for Heidenhain control units.

Hermle “Wear-Diagnosis-System”
Machine status is continually monitored by the Hermle wear diagnosis system. It facilitates rapid machine diagnostics and status-oriented detection of maintenance tasks.

Hermle „Information-Monitoring-Software“
The “Information-Monitoring-Software” displays the live status of the machines and communicates the events.

3D contour tolerance max.
- For 3D roughing with low machining performance.
- Very high machining speed, mainly for free-form surfaces.

3D contour tolerance min.
- For very high demands of machining accuracy, mainly for free-form surfaces.
- Can also be used with conventional programs.

3D path smoothing
- For very high demands on the surface quality, mainly for free-form surfaces.
The C 400’s details are packed with know-how. All attachments and operating devices of the C 400 have been smartly optimized for users and designed specifically for respective machining tasks. The machining center can be transported without any disassembly and set up without a foundation. Furthermore, all units are arranged for easy maintenance and servicing.

**HIGHLIGHTS**

- Comprehensive fluid technology
- Optimized chip management
- Diverse cooling lubricant units
- Scraper belt conveyor
- Hinged belt conveyor

**We provide the correct method of chip removal from the working area for all kinds of chip**

04 Automation
The new HS flex handling system is an automation solution providing cost-effective entry into machining centre automation. The HS flex handling system is an automation solution providing cost-effective entry into machining centre automation. The front-sided adaptation ensures a space-saving layout with direct connection to the machining centre. The large intermediate space provides direct access to the working area for manual operator activities. In automatic mode, a double door blocks operator access; and in setup mode, access to the handling system. The customisable pallet storage modul offers numerous combination options for a large range of parts. A second pallet storage modul can be additionally integrated in the handling system, thus enhancing the storage of parts significantly.

The Hermle Automation-Control-System (HACS), which is operated via an integrated touch panel, provides an ideal platform for intuitive operation and control of the handling system.
Function and movement concept of the handling system. Compact design and space-saving arrangement with optimum access for the machine operator.

- Automation solution for enhanced storage of pallets
- Optimised, operator-friendly access to the machining centre
- Large configurable pallet storage module
- Additional, configurable pallet storage module
- Lateral setup station (optionally rotatable)
- Touch pad with integrated operating software HACS
- No floor anchorage required
- Easy and quick installation and commissioning

PRECISION IN EVERY DIMENSION: Hermle has a thorough understanding of the requirements for manufacturing high-precision machining centers for processing smaller and larger workpieces of up to 2.5 t in weight. For this reason, “The Original” only uses German machines for production and materials from European suppliers.

Furthermore, the entire machining production department is fully air conditioned and kept clean by a central chip disposal system.

Hermle machining centers have also been thoroughly tested by intensive endurance tests and in manufacture-oriented machining processes in our own machining manufacturing department. Our meticulous manufacturing processes allow Hermle to set new precision standards which undercut those demanded by the DIN/ISO 10791 standard in every way.

At Hermle, we distinguish between positional uncertainty (accuracy with which a certain position within the working area can be pinpointed on one axis) and geometric precision.

The latter is significant for the precision of the entire machine – it encompasses the following factors:
- Positioning of linear and rotary axes.
- Straightness and angular deviation of the linear axes.
- Rectangularity and parallel alignment of all axes to one other.
- Concentricity and axial run-out of the swivelling rotary table.
- Concentricity of the working spindle.

The precision of Hermle machining centers originates during mechanical production and is not produced by subsequent electronic compensation.

---

**PRECISION LEVELS**

**Hermle standard:**

- X-Y-Z: Positional uncertainty $P \leq 8 \mu$
- A: Positional uncertainty $P \leq 10''$
- C: Positional uncertainty $P \leq 8''$

Energy efficiency

Both manufacturer and customer benefit from efficient production processes. Therefore, Hermle has focused on integrated resource sustainability and energy efficiency for many years. We can rightly claim pioneer status in the “bluecompetence” initiative founded by the VDW (German Machine Tool Builders Association). From development to low-energy manufacturing (with a high level of in-house production) to the operation of CNC machining centres - Hermle has stood for a principle of sustainable environmental protection combined with economic considerations for many years. Energy recovery is just one of the advantages enjoyed by our customers.

EFFICIENT MANUFACTURING

We use energy efficient manufacturing methods not because it is the current trend or because it is required of us, but on principle. And we always have.

- Low energy component manufacture
  - Mineral casting technology
  - Lightweight construction

- Virtual machine optimization / machine development

- Reduction of transport energy consumption
  - High levels of in-house production
  - Just one production plant
  - Locally sourced components and materials
  - No material tourism

- High-quality, high-efficiency components
  - Ball screws
  - Guideways
  - Antifriction bearing etc.

EFFICIENT OPERATION

Our machining centers are energy efficient both during their manufacture and during operation.

- Energy recovery has been standard at Hermle for over 20 years
- High quality servo axes
- Ideal drive design for the respective application
- Demand-based cooling technology both for dimensioning and in application
- De-energize system: Up to 80% less energy consumption in stand-by mode
- Very long machine service life
The perfection we insist on for the development and production of our machines is also mirrored by our service department. Our service team provides more than just spare parts and rapid response support within hours. At Hermle, we see ourselves as a comprehensive service provider which provides customers with numerous benefits.

Alongside standard services, these include:
- Our superior, cost-effective, practical and flexible training programs carried out by sales representatives directly at the customers’ premises.
- Our continual pursuit of optimization and perfection. Our motto – those who stop improving today will not make the grade tomorrow.
- Intensive expert consultation on milling in general, programming and handling of our products.
- Our application technicians who are experts in machining processes and who are quick to assist and advise our customers.

07
Services
The machining examples used in this leaflet are published with the explicit and kind permission of our customers.

The information in this brochure only contains general descriptions and/or performance features that, in a concrete application, may not always apply in the form described or represented here or may have changed due to further development of the products. The performance features desired shall only be binding if they have been expressly agreed upon in writing at the time of the contract. The machines shown may incorporate options, accessories and control variants.
